On the home page, you have immediate access to a comprehensive overview of the operational status of all locks and codes. This allows you to quickly assess whether everything is functioning correctly or if there are any issues that require attention. Additionally, a detailed log of all events within the system is readily available for your review.

Nyhaven

Under users you can give access to new users by pressing share access.

Devices

The system offers a comprehensive overview of all the locks, providing administrators with a centralized view of their lock infrastructure. This overview displays key information for each lock, including its name, location, status, and any relevant details or settings associated with it.

In addition to the lock overview, administrators have the flexibility to add or remove locks as needed. Adding a lock is a straightforward process, where administrators can enter essential details such as the lock's name, location, and specific configurations or permissions. Upon submission, the system creates a new lock entry in the overview, reflecting the added lock's information.

Similarly, administrators can easily remove locks from the system when required. By selecting a lock from the overview and confirming the removal action, administrators can securely eliminate locks from the system. Careful confirmation prompts help prevent accidental deletions and maintain the integrity of the lock infrastructure.

To streamline lock management further, the system provides additional management actions for each lock. These actions enable administrators to perform various tasks, such as locking or unlocking specific locks, adjusting access control settings, reviewing access logs, or executing other relevant operations tailored to the system's specific requirements.

The overview of gateways with their online/offline status, along with the ability to name and track their locations, provides a comprehensive understanding of your system's connectivity infrastructure and allows for effective troubleshooting and maintenance when needed. Conversely, when a gateway is offline or experiencing issues, it is marked with a pink indicator. This color-coded status allows you to quickly identify the health of each gateway.

Off-line: Status pink.

Admins

The screenshot shows the 'Admins' section of the Locky interface. On the left is a sidebar with navigation options: Home, Users, Devices, Gateways, Admins (highlighted with a red circle), Property management, and Settings. The main area is titled 'Users' and contains an 'invite user' button and a table of users.

| First Name | Last Name | Email |
|------------|-----------|---------------------------|
| Kai | Tender | kai@yalidian.com |
| Sunnalsara | Hotell | service@sunnalsora.no |
| Marte | Analle | marteanalle@gmail.com |
| Sabrina | Grødal | brankos@live.no |
| Vivian | Bill | vivianbill42@hotmail.com |
| Kai | Tender | ktonder@gmail.com |
| Trond | Andersen | trond@locky.tech |
| Daglig | Leder | dagligleder@sunnalsora.no |

Administrators can successfully invite users to join and administer the system, ensuring that the right individuals have the necessary access and control over system operations.

Property management

The screenshot shows the 'Property management' section of the Locky interface. The sidebar on the left has 'Property management' highlighted with a red circle. The main area is titled 'Active bookings' and displays a grid of booking cards for different rooms.

| Room | Guest Name | Status | Source | Code | Comment | Created |
|------------------|------------------|------------|--------|------------|---------|------------------|
| Dobbeltrom - 203 | Brian Kristensen | Checked in | bedify | 5596 | | 20.05.2023 17:01 |
| Dobbeltrom - 207 | Zygmunt Kolodzei | Checked in | bedify | 6029 | | 14.05.2023 19:13 |
| Dobbeltrom - 209 | | Checked in | | 7958 | | 08.05.2023 22:43 |

Picasso
Picasso Booking System simplifies appointment, event and service bookings with features such as: submitted reminders, customizable forms, and real time availability. It guarantees the booking process for businesses and customers alike.

Visbook

SRPMS
The Sirvoy booking system is a software tool designed to help businesses manage their reservations and bookings efficiently. It allows customers to make bookings online, view availability, and receive confirmation of their reservations. The system provides businesses with a centralized platform to manage reservations, track customer data, and generate reports. With Sirvoy, businesses can streamline their booking processes, reduce errors, and improve customer satisfaction.

Mews
Mews is a modern, cloud-based property management system that provides hotels, resorts, and other types of accommodation providers with a comprehensive solution for managing their daily operations. With its user-friendly interface and advanced features, Mews simplifies the process of managing reservations, check-ins, check-outs, and other essential aspects of hotel operations.

Under the powerups tab you can choose between different functions and integrations in the access control system.

ZONES

Zones

Activating zones give you the ability to combine locks, alarm sensors etc into one zone. Utilizing this feature will be handy when you need for example to create a zone of the main entrance door and your office door. One key connected to zone instead of connecting keys to multiple locks.

[Activate zone support](#)

The foremost benefit is unparalleled convenience. By consolidating access into a single key or code, you no longer need to carry around an excessive number of keys or struggle to remember multiple combinations. Instead, a single key or code grants you access to various locks within the designated zone, making your daily routines significantly smoother and more efficient.

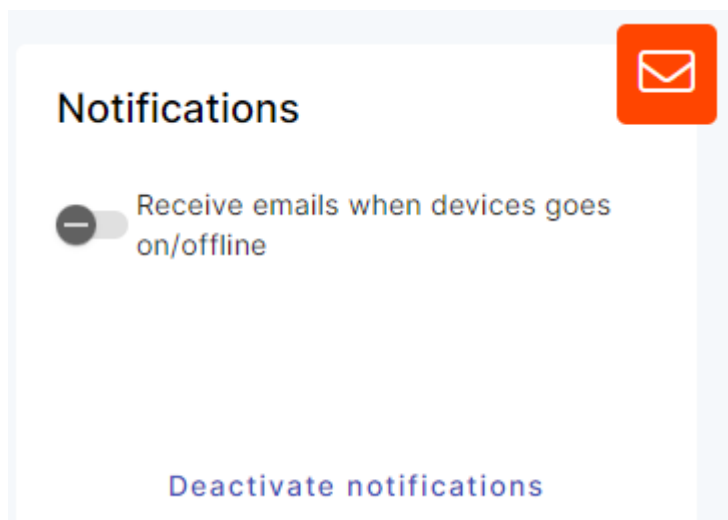

In summary, zone support is an invaluable feature that elevates access control systems to new heights. Its seamless integration of convenience, flexibility, security, and cost-effectiveness make it an

LOCKY

ideal solution for any setting where multiple locks need to be managed efficiently. Embracing zone support empowers you to optimize access control and enjoy a truly enhanced experience.

Notifications

By utilizing the notification feature, you gain a significant advantage in effectively managing your locks and gateways. With notifications switched on, you stay one step ahead of potential problems, enabling you to swiftly tackle them head-on. The timely alerts keep you well-informed, ensuring that you are promptly made aware of any issues that may arise. This proactive approach empowers you to maintain optimal security and seamless operation of your locks and gateways. With notifications as your trusted ally, you can effortlessly address any concerns, fostering a sense of confidence and tranquility. Say goodbye to unexpected surprises and welcome the convenience of a streamlined problem-solving process.

| <small>Sms text</small> Welcome {{name}}, we have assigned room {{room}} to you, you can open it using code: {{code}} | |
| <small>Default start time</small> 15:00 | <small>Default end time</small> 11:00 |
| Save | |

Create your own welcome text that goes out to the guest when the code is generated by SMS.

End time/start time

| |
|--|
| <small>Default start time</small> 15:00 |
|--|

Set the time you want the code to become active and the guests can start to check in using their code.

End time/start time

Default end time
11:00

Time for when the code will stop working. Automatic check out..

Other settings

Other settings

Tenant id : 644168c1cc31cf5a38d86f04
Token : 53c9be30-f84a-4c17-9b62-3018deca8563

- Enable multiple codes on room, if not when a new code is generated the old one is removed!
- Automatically delete expired bookings!
- Automatically check in bookings!
- Automatically check out bookings!
- Automatically send message on creation
- Force default check in time (when using API)
- Force default check out time (when using API)

When integrating with a booking system, it's crucial to have flexibility in adjusting various settings, especially when certain booking systems don't inherently support automatic check-in and check-out. In such cases, having the ability to enable these features under the "Other Settings" section can be invaluable.

Automation

Say goodbye to the hassle of manually unlocking and locking your doors every time. With this convenient feature, you can effortlessly automate the process, ensuring convenience, security, and peace of mind. Take control of your home's security and streamline your daily routine with our Door Lock Automation.

Create an automated task

Åpne 06:00

Opened 09.08 - 06:00, next 10.08.2023 - 06:00

Hoveddør

Mon Tue Wed Thu Fri Sat Sun

Låse 23:00

Closed 08.08 - 23:00, next 09.08.2023 - 23:00

Hoveddør

Mon Tue Wed Thu Fri Sat Sun

Now you also have the option to automate your doors with our timer function. This is a very useful function in relation to main doors. Then you can automatically let them open for example at 0700 and close at 2300 automatically.
